

The CVIS after CVIS Support Packages

The CVIS after CVIS Support Packages provides continued support for the CVIS platform and enables you to continue to safely test, try and use the core of CVIS, the open ITS platform defined by the European ITS project CVIS - Cooperative Vehicle Infrastructure Systems.

The CVIS ITS Architecture

The CVIS project has defined an open ITS architecture where a fundamental middleware framework (OSGi) provides a rich set of core facilities such as communication and positioning (implemented as OSGi services).

The result of CVIS is an integrated, open platform that can host virtually any application desired. CVIS has effectively created the **ITS Application Store**.

The CVIS after CVIS Support Packages

The CVIS after CVIS Support Packages provides continued support for selected parts of the CVIS platform. With the CVIS after CVIS Support Packages a small scale CVIS system can easily be set up by anyone interested in using or further exploring the CVIS platform after the official end of the CVIS project.

The CVIS after CVIS Support Packages includes a selection of core technologies from the CVIS project. There are two main packages that can be used combined, or individually.

- **Knopflerfish Pro CVIS SDK** - The CVIS Host Execution Environment for CVIS applications, including selected ITS facilities, an SDK (Software Development Kit) and emulators.
- **Ubicore CVIS HMC** - The CVIS Host Management Center (HMC), enabling remote management of the CVIS Applications running in the CVIS Host.

These two packages combined form the core of the ITS Application Store concept.

Knopflerfish Pro CVIS SDK can run on any HW capable of running Java. For running the native CALM stack the CVIS defined HW is recommended.

The Ubicore CVIS HMC requires a server running Java. Supported OS's are Windows, Linux and Mac OS X. A default Postgres DB is included.

Licensing & Pricing

The Trial Kit is intended for pre-commercial use, including publicly funded R&D projects.

The annual fees are:

Knopflerfish Pro CVIS SDK	2 500 Euro
Ubicore CVIS HMC	2 500 Euro

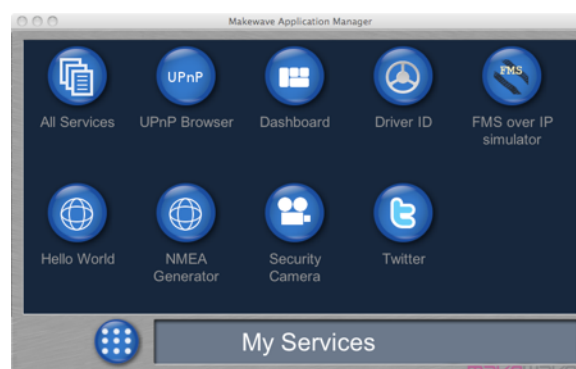

This includes one year support and maintenance, including software upgrades, and software licenses for pre-commercial use.

Full commercial license are available upon request.

The CVIS project

The CVIS project website provides extensive information and documentation on the project:
