

## Knopflerfish OSGi Service Platform

*Knopflerfish is available in several different versions. This comparison chart helps you to find the right version and level of support for your needs.*

### Knopflerfish OSGi Service Platform

Knopflerfish is the leading universal open source OSGi Service Platform. Led and maintained by Makewave, Knopflerfish delivers significant value as key technology for many products.

In addition to open source Knopflerfish Makewave provides a series of fully supported and certified Pro versions of Knopflerfish.

The Knopflerfish Pro series also includes a set of value added services unique to Knopflerfish Pro. This includes features like UPnP, Remote Management functions (TR-69/OMA-DM), gateway portal etc.

More information on the Knopflerfish project is available at: <http://www.knopflerfish.org>

### Knopflerfish Service Program

With the Knopflerfish Service Program series we provide the full assurance many companies demand for using open source software in commercial products.

For all versions of Knopflerfish the Knopflerfish Service Program / Service Level Agreement is available. This applies also the open source Knopflerfish standard version.

The Knopflerfish Service Programs data sheet explains the contents of the service programs in more detail.

The comparison table below describes in more detail what features are included for which version of Knopflerfish.

Feature	Knopflerfish	Knopflerfish Pro	Knopflerfish Pro Premium	Knopflerfish Pro CVIS
