

Our professional services

Makewave Ubility offers a full set of consulting services for each phase of the development from assessment and implementation right through to deployment and maintenance. We offer focused solutions tailored to meet your specific business needs, from individual projects to full outsourcing.

The Makewave Ubility team provides you with expert assistance when designing, developing, or integrating your solutions. Knowledgeable consultants, that have an in-depth understanding of your technology and how to best apply them for various designs, deliver all engagements.

Areas of expertise

Communication

Expertise ranging from modems, drivers, communication stacks in embedded client such as Telematics gateways and mobile phones, and end-to-end communication from a back-end server to mobile infrastructure.

Distributed Systems Design

The OSGi service platform and its architecture is by nature a distributed system. Having been involved in the OSGi business ever since its inception in 1999, Makewave has gained vast experience in designing, developing and integrating distributed systems, OSGi based as well as non-Java based.

Embedded Systems

Makewave offers advanced skills in embedded systems design of set-top boxes, mobile phones, residential gateways and so forth, including JVM setup & ports, operating systems, device drivers etc.

Enterprise Software

Software life-cycle management is becoming an essential part for software developers; it is simply vital to easily maintain and upgrade the software in the field without operational disturbances. With many years of hands-on experience, Makewave has vast knowledge of how to approach and solve scenarios like these.

Ubiquitous abilities

With extensive experience, the Makewave Ubility team combines ubiquitous abilities and key competence in the following industries:

Automotive

By working with several OEMs and participating in large pan-European projects Makewave has gained invaluable insight and knowledge.

Enterprise

Enterprise Software is a rapidly growing segment that is getting more and more business. With long-term software life-cycle and license management experience, Makewave can assist in the best possible way.

Industrial

Companies within the industrial market early on realized the need to remotely manage their products and Makewave have been working alongside since early 2000 providing expertise knowledge.

Residential

Smart home solutions were the key reason to why Makewave was established in 1999, under the name Gatespace. We have been in the business ever since and can proudly call ourselves veterans within the field.

Telecom

Makewave's know-how include mobile devices, communications and back-bone infrastructure.
