

Makewave at a glimpse

Makewave is at the forefront of new and evolving markets, where innovative solutions for a wide variety of industries such as automotive, enterprise, industrial, residential and telecom all blend together into one - what we call ubiquitous services.

Makewave - with the flagship product Knopflerfish Pro - is a leading provider of ubiquitous systems and solutions, as well as OSGi based platform technology, leading expertise in distributed systems design, java technology and embedded systems. We believe that our comprehensive technology and industry expertise, gained through years of experience, and our nature as an Open Source community contributor is what sets us apart from the competition;

Makewave Ubility

When trying to abbreviate our skills into a few words we found ourselves struggling - no words could accurately enough describe our comprehensive versatility, flexibility and expertise. So, what do you do when there are no roads? You pave them. At Makewave, we are used to leading the way, and were not hindered by a simple lack of vocabulary. Much like when we revolutionize, refine or invent new software architecture, we turned these skills into inventing our own word describing just what sets our consultancy services apart. We invented 'ubility' and it basically means that since we have a proven track-record of successful operations within all of the mentioned industries we are your perfect choice whether you need consulting and support or first-rate middleware.

We believe in sharing

Being a strong believer in open systems, open standards and open source, Makewave is working actively within the OSGi Alliance, participates in standardization projects, and offers an open source certified OSGi service platform - Knopflerfish.

What we do

Makewave is the versatile IT company whose organizational structure is easiest described as divided into three separate, but yet closely intertwined, segments - the *Product Portfolio*, the *Consulting Portfolio* and the *OpenSource Portfolio*.

Product Portfolio

We have three strong products in this portfolio:

Knopflerfish Pro - OSGi framework implementation

Ubicore - Remote management system

Lime - Software License management system

Knopflerfish Pro can be used in any network device or solution, Ubicore manage Knopflerfish Pro out on the field and Lime takes care of all license management.

Consulting Portfolio

Our uniquely skilled consultants offer knowledge only gathered from working within the very core of OSGi and Java development. We have chosen to divide this portfolio into two main areas OSGi Expertise - which includes pure OSGi consultancy, training and support - and Makewave Ubility; i.e. our prime engineers offering professional services within any field of the ubiquitous services industries (automotive, enterprise, industrial, residential and telecommunications).

Open Source Portfolio

Since we always have loved the joy of giving, Makewave early on understood the tremendous potential of a vibrant and dedicated development community. By supporting, maintaining, contributing and endorsing various Open Source projects, Makewave has quickly made a mark as one of the industry's more avid Open Source promoters - especially considering our role as maintainer of the Knopflerfish organization and its globally appreciated platform standards.

Company Facts

Makewave is a Swedish IT-company located in Gothenburg, with our roots originating in a joint venture between telecom giants Ericsson and renowned incubators Carlstedt Research & Technology. BMW, Ericsson, Ricoh, Siemens and Volvo are among our references.
